## How Net Nanny works

Net Nanny uses dynamic analysis (in conjunction with URL and keyword lists) to filter Web content. As Web pages are requested, Net Nanny’s dynamic analysis engine is able to understand the words and phrases in context and filter appropriately. Based on the user’s filter settings, Web content is either allowed or blocked.

## New with Net Nanny 6.0

- User-friendly Interface and Set-up
- Alerts for Predator and Cyber bullying behavior
- PC game management using ESRB™ ratings
- Social networking profile reporting
- Customizable “Safe List” capability (White List)
- User profile creation with age-based settings
- Instant sync of user profile changes made remotely
- Filtering of encrypted and secure proxy websites
- Enhanced performance for faster surfing
- Automatic filter definition updates
- And much, much more...
